M.Sc. CHEMISTRY (CBCS) SYLLABUS

(Effective from the academic year 2016-2017 for Campus including affiliated and district PG Centers)

SEMESTER -I

Paper-I: CH 101T (INORGANIC CHEMISTRY)

IC 01: Symmetry of molecules

IC 02: Bonding in Metal Complexes - I

IC 03: Coordination equilibria

IC 04: Ligational aspects of diatomic molecules

IC-01: Symmetry of Molecules:

Concept of Symmetry in Chemistry - Symmetry Operations - Symmetry Elements : Rotational Axis of Symmetry and Types of Rotational Axes, Plane of Symmetry and types of Planes, Improper Rotational Axis of Symmetry, Inversion Center and Identity Element -More about Symmetry Elements - Molecular Point Groups: Definition and Notation of Point Groups, Classification Molecules in to $C_1,\,C_s$, C_i , C_n , C_{nv} , C_{nh} ,

 $C_{\varpi v}$, D_n , D_{nh} , D_{nd} , $D_{\varpi h}$, S_n (n=even), T , T_h , T_d , O , O_h , $I,~I_h$, K_h Groups. Descent in Symmetry with Substitution - Exercises in Molecular Point Groups - Symmetry and Dipole

IC - 02: Bonding in metal complexes - I:

Crystal Field Theory: Salient features of CFT. d-orbital splitting patterns in regular Octahedral, tetragonally distorted octahedral, Jahn-Tellar theorem-, tetrahedral, square planar, trigonal planar, and linear geometries. Factors influencing the magnitude of crystal field splitting in octahedral complexes - nature of metal ions, nature of ligands, geometry. Concept of weak field and strong fields. - Calculation of crystal field stabilization energies (CFSE's) in six and four coordinate complexes.

Types of magnetic behaviour - magnetic susceptibility - calculation of magnetic moment from magnetic susceptibility spin only formula, - Quenching of orbital angular momentum -Determination of magnetic moment from Guoy's method . Applications of magnetic moment data for the determination of oxidation states, bond type and stereochemistry.

IC-03: Coordination Equilibria:

000

Solvation of metal ions- Binary complexes: Formation of binary Metal Complexes and their stability - types of Stability Constants - relation between them- trends in Step-wise Stability Constants (Factors causing decrease and increase in Step-wise Stability) - Factors influencing the stability constants : (i) Ligand effects: Basicity , Substituent , Steric

Nospalar P. La cour Vely

,Chelate(size and number of chelate rings), Macrocyclic and Cryptate effects- (ii) Metal ion effects: Ionic potential ,Effective Nuclear charge and Atomic Number (Irving-William's Order, geometry of Metal ion and Ligand) – Chelate effect and its Thermodynamic origin – Jahn-Tellar effect on Stability constants of Metal complexes – Pearson's Theory of Hard and Soft Acids and Bases (HSAB), Applications of HSAB, Electronegetivity Vs Hardness and Softness. Symbiosis – Methods used for the determination of Stability constants (Basic Principles only): pH metric, Spectrophotometric and Polarographic methods.

Ternary Metal Complexes – definition – Formation of ternary metal complexes – Stepwise and simultaneous equilibria with simple examples.

IC - 04: Ligational Aspects of Diatomic molecules:

Metal Carbonyls:- Carbon monoxide as a ligand – Molecular orbitals of CO - Donor and Acceptor molecular orbitals of CO; Bonding modes of CO- Terminal and Bridging; Evidence for multiple bonding from Bond lengths and Stretching frequencies; 18 Valence electron rule and its application.

Metal Nitrosyls: - NO as a ligand - Molecular orbitals of NO - Donor and Acceptor components; Bonding modes of NO - Terminal (Linear, Bent) and Bridging;

Structural aspects of [IrCl(PPh₃)₂(CO)(NO)]⁺ and [RuCl(PPh₃)₂(NO)₂]⁺.

Stereo chemical control of valence in [Co(diars)₂(NO)]²⁺ and [Co(diars)₂(NO)(SCN)]⁺.

Metal Dinitrogen complexes: - N₂ as aligand – Molecular orbitals of N₂; Bonding modes – Terminal and Bridging; Stretching frequencies; Structures of Ru (II) and Mo (0) dinitrogen complexes; Chemical fixation of dinitrogen.

Paper-II: CH 102 T(ORGANIC CHEMISTRY)

OC-01: Stereochemistry

OC-02: Reaction mechanism-I

OC-03: Carbohydrates and Proteins

OC-04: Heterocyclic compounds

OC-01: Stereochemistry

Molecular representations: Wedge, Fischer, Newman and Saw-horse formulae, their description and interconversions.

Molecular Symmetry & Chirality: Symmetry operations and symmetry elements (Cn & Sn). Criteria for Chirality. Desymmetrization.

Axial, planar and helical chirality: Configurational nomenclature: Axially chiral allenes, spiranes, alkylidene cycloalkanes, chiral biaryls, atropisomerism. Planar chiral ansa compounds and trans- cyclooctene. Helically chiral compounds

Relative and absolute configuration: Determination of absolute configuration by chemical correlation methods.

Racemisation, racemates and resolution techniques: Resolutions by direct crystallization, diastereoisomer salt formation chiral chromatography and asymmetric transformation.

Determination of configuration in E,Z-isomers: Spectral and Chemical methods of configuration determination of E,Z isomers. Determination of configuration in aldoximes and ketoximes.

OC-02: Reaction mechanism-I

Electrophilic addition to carbon double bond: Stereoselective addition to carbon carbon double bond; anti addition- Bromination and epoxidation followed by ring opening. Syn addition of OsO4 and KMnO4.

Elimination reactions Elimination reactions E2, E1, E1CB mechanisms. Orientation and stereoselectivity in E2 eliminations. Pyrolytic syn elimination and α -elimination, elimination Vs substitution.

Determination of reaction mechanism: Determination of reaction mechanism: Energy profiles of addition and elimination reactions, transition states, product isolation and structure of intermediates, use of isotopes, chemical trapping, crossover experiments. Use of IR and NMR in the investigation of reaction mechanism.

OC-03: Carbohydrates and Proteins

Carbohydrates: Determination of the relative and absolute configuration in D (+) glucose and D (-) fructose. Proof for the chair conformation of D (+) glucose. Occurrence, importance and synthesis of monosaccharides containing functional groups such as amino, halo and sulphur. Structure elucidation and synthesis Conformational structures of D(+)ribose, 2-deoxyD-ribose, sucrose, lactose maltose and cellobiose. Structural features of starch, cellulose and chitin.

Proteins: Acid and enzymatic hydrolysis of proteins. Determination of the amino acid sequence in polypeptides by end group analysis. Chemical synthesis of di and tripeptides. Merrifield's solid phase synthesis.

OC-4: Heterocyclic compounds

Importance of heterocyclic compounds as drugs. Nomenclature of heterocyclic systems based on ring size, number and nature of hetero atoms. Synthesis and reactivity of indole, benzofuran, benzothiophene, quinoline, isoquinoline, coumarin, chromone, carbazole and acridine.

Paper-III: CH 103 T(PHYSICAL CHEMISTRY)

PC-01: Thermodynamics-I

PC-02: Electrochemistry-I

PC-03: Quantum Chemistry-I

PC-04: Chemical Kinetics-I

PC-01: Thermodynamics-I

Brief review of concepts of I and II laws of thermodynamics. Concept of entropy. Entropy as a state function. Calculation of entropy changes in various processes. Entropy changes in an ideal gas. Entropy changes on mixing of ideal gases. Entropy as a function of V and T.

Entropy as a function of P and T. Entropy change in isolated systems- Clausius inequality. Entropy change as criterion for spontaneity and equilibrium.

Third law of thermodynamics. Evaluation of absolute entropies from heat capacity data for solids, liquids and gases. Standard entropies and entropy changes of chemical reactions. Helmholtz and Gibbs free energies (A and G). A and G as a criteria for equilibrium and spontaneity. Physical significance of A and G. Driving force for chemical reactions- relative signs of ΔH and ΔS .

Thermodynamic relations. Gibbs equations. Maxwell relations. Temperature dependence of G. Gibbs-Helmholtz equation. Pressure dependence of G.

Chemical potential: Gibbs equations for non-equilibrium systems. Material equilibrium. Phase equilibrium. Clapeyron equation and Clausius-Clapeyron equation.

Conditions for equilibrium in a closed system. Chemical potential of ideal gases. Ideal-gas reaction equilibrium-derivation of equilibrium constant. Temperature dependence of equilibrium constant-the van't Hoff equation.

PC-02: Electrochemistry- I

11111111111111111111111

Electrochemical Cells: Derivation of Nernst equation – problems. Chemical and concentration cells (with and without transference). Liquid junction potential – derivation of the expression for LJP – its determination and elimination. Applications of EMF measurements: Solubility product, potentiometric titrations, determination of transport numbers, equilibrium constant measurements.

Decomposition potential and its significance. Electrode polarization – its causes and elimination. Concentration overpotential.

Concept of activity and activity coefficients in electrolytic solutions. The mean ionic activity coefficient. Debye-Huckel theory of electrolytic solutions. Debye-Huckel limiting law (derivation not required). Calculation of mean ionic activity coefficient. Limitations of Debye-Huckel theory. Extended Debye-Huckel law.

Theory of electrolytic conductance. Derivation of Debye-Huckel-Onsager equation – its validity and limitations.

Concept of ion association – Bjerrum theory of ion association (elementary treatment) - ion association constant – Debye-Huckel-Bjerrum equation.

PC-03: Quantum Chemistry- I

Black body radiation-Planck's concept of quantization-Planck's equation, average energy of an oscillator (derivation not required). Wave particle duality and uncertain principle-significance of these for microscopic entities. Emergence of quantum mechanics. Wave mechanics and Schroedinger wave equation.

Operators-operator algebra. Commutation of operators, linear operators. Complex functions. Hermitian operators. Operators and ² . Eigenfunctions and eigenvalues. Degeneracy.

Linear combination of eigenfunctions of an operator. Well behaved functions. Normalized and orthogonal functions.

Postulates of quantum mechanics. Physical interpretation of wave function. Observables and operators. Measurability of operators. Average values of observables. The time dependent Schrodinger equation. Separation of variables and the time-independent Schrodinger equation ..

Theorems of quantum mechanics. Real nature of the eigen values of a Hermitian operatorsignificance. Orthogonal nature of the eigen values of a Hermitian operator-significance of orthogonality. Expansion of a function in terms of eigenvalues. Eigen functions of commuting operators-significance. Simultaneous measurement of properties and the uncertainty principle.

PC-04: Chemical Kinetics- I

Theories of reaction rates: Collision theory, steric factor. Tranition state theory. Reaction coordinate, activated complex and the transition state. Thermodynamic formulation of transition state theory. Activtion parameters and their significance. The Eyring equation. Unimolecular reactions and Lindamann's theory.

Complex reactions- Opposing reactions, parallel reactions and consecutive reactions(all first order type). Chain reactions-general characteristics, steady state treatment. Example- H2-Br2 reaction. Derivation of rate law.

Line orth Pos and Sch equ The sign of the Co or ree En er fr protection of the End of the Co or ree En er fr protection of the End of the Co or ree En er fr protection of the End of the Co or ree En er fr protection of the End of the Co or ree En er fr protection of the En er fr protection Effect of structure on reactivity- Linear free energy relationships. Hammett and Taft equations-substituent(and *) and reaction constant (and *) with examples. Deviations from Hammett correlations. reasons- Change of mechanism, resonance interaction. Taft four parameter equation. Correlations for nucleophillic reactions. The Swain - Scott equation and the Edward equation.

The reactivity-selectivity principle and the isoselectivty rule. The intrinsic barrier and Hammond's postulate.

Paper-IV: CH 104 T (ANALYTICAL TECHNIQUES and SPECTROSCOPY- I)

ASP 01: Techniques of Chromatography

ASP 02: NMR spectroscopy-I (1H NMR)

ASP 03: Rotational and Vibrational spectroscopy

ASP 04: Electronic spectroscopy

ASP-01: Techniques of Chromatography

- Introduction, Classification of chromatographic techniques, differential migration i. rates, partition ratio, retention time, relation between partition ratio and retention time, capacity factor, selectivity factor. Efficiency of separation- resolution, diffusion, plate theory and rate theory.
- GC: Principle, instrumentation, detectors- TCD, FID, ECD. Derivatisation techniques, ii. PTGC.
- HPLC: Principle, instrumentation, detectors- UV detectors, Photodiode array detector, iii. fluorescence detector.
- Applications: Methods of quantitation for GC and HPLC: GC analysis of iv. hydrocarbons in a mixture, GC assay of methyl testosterone in tablets, atropine in eye drops. HPLC assy of paracetamol and asprin in tablets.

ASP 02: NMR spectroscopy-I (1H NMR)

¹H NMR spectroscopy: Magnetic properties of nuclei, Principles of NMR. Instrumentation, CW and pulsed FT instrumentation, equivalent and non equivalent protons, enantiotopic and diastereotopic protons, Chemical shifts, factors affecting the chemical shifts, electronegativity and anisotropy, shielding and deshielding effects, Signal integration, Spin-spin coupling: vicinal, germinal and long range, Coupling constants and factors affecting coupling constants. Applications of ¹H NMR spectroscopy: Reaction mechanisms (cyclic bromonium ion, electrophilic and nucleophilic substitutions, carbocations isomers, conformation of cyclohexane and decalins, keto-enol tautomerism, hydrogen and carbanions), E, Z bonding, proton exchange processes (alcohols, amines and carboxylic acids), C-N rotation. Magnetic resonance imaging(MRI). ¹H NMR of organic molecules and metal complexes:

ethyl acetate, 2- butanone, mesitylene, paracetamol, asprin, ethylbenzoate, benzyl acetate, 2-chloro propionic acid, [HNi(OPEt₃)₄]⁺, [HRh(CN)₅] Rh *I*=1/2, [Pt(acac)₂].

ASP 03: Rotational and Vibrational spectroscopy

- a). Microwave Spectroscopy: Classification of molecules based on moment of inertia. Diatomic molecule as rigid rotator and its rotational energy levels. Selection rules (derivation not required). Calculation of bondlengths from rotational spectra of diatomic molecules. Isotope effect on rotational spectra. Calculation of atomic mass from rotational spectra. Brief description of microwave spectrometer.
- b). Vibrational Spectroscopy. Vibrational energy levels of diatomic molecules, selection rules (derivation not required). Calculation force constant from vibrational frequency. Anharmonic nature of vibrations. Fundamental bands, overtones and hot bands, Fermi Resonance. Vibration-rotation spectra diatomic molecules. Vibrations of poly atomic molecules. Normal modes of vibration, concept of group frequencies. Characteristics of vibrational frequencies of functional groups; Stereochemical effects on the absorption pattern in carbonyl group, cis-trans isomerism and hydrogen bonding. Isotopic effect on group frequency. IR spectra of metal coordinated NO₃, SO₄²⁻ and CO₃²⁻ ions.

Raman Spectroscopy- Quantum theory of Raman effect, Rotational raman and Vibrational Raman spectra, Stokes and anti- Stokes lines. Complementary nature of IR and Raman spectra.

ASP 04:Electronic spectroscopy

Electronic spectroscopy: Electronic spectra: Elementary energy levels of molecules-selection rules for electronic spectra; types of electronic transitions in molecules. Chromophores: Congugated dienes, trienes and polyenes, unsaturated carbonyl compounds, benzene and its derivatives, Woodward-Fieser rules. Polynuclear aromatic hydrocarbons and diketones. Solvent and structural influences on absorption maxima, stereochemical factors. Cis-trans isomers, and cross conjugation. Beer's law application to mixture analysis and dissociation constant of a weak acid.

Paper CH 151P: Inorganic Chemistry Practicals: 6 hrs/week

I. Calibrations:

James

- (i) Calibration of weights.
- (ii) Calibration of pipettes.
 - (iii) Calibration of standard flasks.
 - (iv) Calibration of burette.
 - II. EDTA back-titrations:
 - (i) Estimation of Ni2+.
 - (ii) Estimation of Al3+.
 - III. EDTA substitution titrations:

Estimation of Ca²⁺.

IV. Preparation of complexes:

- (i). Hexaammine nickel (II) chloride.
- (ii). Tris (acetylacetanato) manganese.
- (iii). Tris (ethylenediamine) nickel (II) thiosulphate.
- (iv). Mercury tetrathiocyanato cobaltate (II).
- V. Preparation of complexes and calculation of % purity:
- (i). Tetrammine copper (II) sulphate and estimation of NH3 and calculation of % purity.
- (ii). Pentaammine (chloro) cobalt (III) chloride and estimation of Cl and calculation of % purity.
- (iii). Sodium trioxalato ferrate (III) and estimation of $C_2O_4^{\ 2-}$ and Fe^{2+} and calculation of % purity.

Paper CH 152P Organic Chemistry Lab course: 6 hrs / week

Synthesis of the following compounds: p-Bromoacetanilide (using Ceric ammonium nitrate KBr), p-Bromoaniline, 2,4,6tribromoaniline, 1,3,5-tribromobenzene, tetrahydrocarbazole, 7-hydroxy-4-methylcoumarin, m-dinitrobenzene, m-nitroaniline, hippuricacid, azlactone, anthracene-maleicanhydride adduct, phthalimide, dihydroxyacetophenone and dihydropyrimidinone (using Ethylacetoacetate , Benzaldehyde and Urea).

References.

Paper 153P Physical Chemistry Lab course: 6 hrs / week

Physical properties: Determination of density, surface tension and viscosity of liquids

Distribution:

Distribution of acetic acid between n-butanol and water Distribution of iodine between CCl4 and water

Chemical kinetics:

Acid-catalyzed hydrolysis of methyl acetate Peroxydisulphate- Γ reaction (overall order) Oxidation of iodide ion by hydrogen peroxide- iodine clock reaction

Conductometry:

Titration of strong acid vs strong base Titration of weak acid vs strong base Determination of cell constant Determination of dissociation constant of a weak acid

Potentiometry:

Panne A Pi Pi D Titration of strong acid vs strong base Titration of weak acid vs strong base Determination of dissociation constant of a weak acid Determination of single electrode potential

Polarimetry:

\$

6

Determination of specific rotation of sucrose Acid-catalyzed hydrolysis of sucrose (inversion of sucrose)

Adsorption and others:

Adsorption of acetic acid on animal charcoal or silica gel Determination of critical solution temperature of phenol-water system Effect of added electrolyte on the CST of phenol-water system

SEMESTER -II

Paper-I: CH 201T (INORGANIC CHEMISTRY)

IC 05: Reaction mechanisms of transition metal complexes

IC 06: Bonding in metal complexes-II

IC 07: Metal clusters

IC 08: Bio coordination chemistry

K. G. AN

II. Sem

IC-05: Reaction mechanisms of transition metal complexes:

Ligand substitution reactions:

4

Energy profile of a reaction - Transition state or Activated Complex. Types of substitution reactions (SE,SN,SN¹,SN²).

Ligand substitution reactions in octahedral complexes:

Aquation or Acid hydrolysis reactions, Factors effecting Acid Hydrolysis, Base Hydrolysis, Conjugate Base Mechanism, Evidences in favour of SN¹CB Mechanism.

Annation reactions.

Substitution reactions with out Breaking Metal-Ligand bond.

<u>Ligand Substitution reactions in Square-Planar complexes</u>: Mechanism of Substitution in Square-Planar complexes- Trans-effect, Grienberg's Polarization theory and π - bonding theory – Applications of Trans-effect in synthesis of Pt (II) complexes.

Electron Transfer Reactions (or Oxidation-Reduction Reactions) in Coordination compounds: Mechanism of One-electron Transfer Reactions: Atom (or group) Transfer or Inner Sphere Mechanism, Direct electron Transfer or Outer Sphere Mechanism.Marcus –Hush theory.

IC-06: Bonding in Metal Complexes - II:

Free ion terms and Energy levels: Configurations, Terms, States and Microstates – Formula for the calculation of Microstates pⁿ and dⁿ configurations – L-S (Russel-Saunders) coupling scheme – j-j coupling scheme – Determination of terms for various pⁿ and dⁿ configurations of metal ins. Hole formalism – Energy ordering of terms (Hund's rules) Inter – electron repulsion Parameters (Racah parameters) – Spin-Orbital coupling parameters. Effect of weak cubic crystal fields on S,P,D and F terms- Orgel Diagrams.Jahn –Tellor theorem and its effects on terms.

IC-07: Metal Clusters:

Carbonyl clusters: Factors favouring Metal-Metal bonding – Classification of Clusters – Low Nuclearity Clusters: M₃ and M₄ clusters, structural patterns in M₃(CO)₁₂ (M=Fe,Ru,Os) and M₄(CO)₁₂ (M=Co,Rh,Ir) Clusters-. Metal carbonyl scrambling – High Nuclearity clusters M₅,M₆,M₇,M₈ and M₁₀ Clusters-, Polyhedral skeletal electron pair theory and Total Electron Count theory – Wades rules – Capping rule – Structural patterns in

 $\begin{array}{l} \left[Os_6(CO)_{18} \right]^{2^{-}} \text{, } \left[Rh_6(CO)_{16} \right] \text{, } \left[Os_7(CO)_{21} \right] \text{ , } \left[Rh_7(CO)_{16} \right]^{3^{-}} \text{, } \left[Os_8(CO)_{22} \right]^{2^{-}} \text{ , } \left[Os_{10}C(CO)_{24} \right]^{2^{-}} \text{ and } \left[Ni_5(CO)_{12} \right]^{2^{-}} \end{array}$

Metal Halide clusters: Major structural types in Dinuclear Metal-Metal systems – Edge sharing Bioctahedra, Face sharing Bioctahedra, Tetragonal prismatic and Trigonal antiprismatic structures -. Structure and bonding in $[Re_2Cl_8]^{2^-}$ and Octahedral halides of $[Mo_6(Cl)_8]^{4^+}$ and $[Nb_6(Cl)_{12}]^{2^+}$. Trinuclear halides of Re(III). Hoffman's Isolobal analogy and its Structural implications.

IC-08: Bio Coordination Chemistry:

Metal ions in Biological systems: Brief survey of metal ions in biological systems. Effect of metal ion concentration and its physiological effects. Basic principles in the biological selection of elements.

Oxygen transport and storage: Hemoglobin and Myoglobin: Geometric, electronic and magnetic aspects of Dioxygen binding, Oxygen adsorption isotherms and cooperativity in Hemoglobin and its physiological significance. Role of globin chain. Hemorythrin and Hemocyanin: Structure of deoxy forms, oxygen binding, Geometric, electronic and magnetic aspects. Comparison of Hemerythrin and Hemocyanin with hemoglobin.

Photosynthesis: Structural aspects of Chlorophyll. Photo system I and Photo system II.

<u>Vitamin B₆ model systems</u>: Forms of vitamin B₆ with structures. Reaction mechanisms of (1) Transamination (2) Decarboxylation and (3) Dealdolation in presence of metal ions.

Paper-II: CH 202T (ORGANIC CHEMISTRY)

OC-05: Conformational analysis (acyclic systems)

OC-06: Reaction mechanism-II

0

OC-07: Reactive intermediates and Molecular rearrangements.

OC-08: Natural products (Terpenoids and Alkaloids).

OC-05: Conformational analysis (acyclic systems)

Introduction to conformational isomerism and the concept of dynamic stereochemistry. Study of conformations in ethane and 1,2-disubstituted ethane derivatives like butane, dihalobutanes, halohydrin, ethylene glycol, butane-2, 3-diol amino alcohols and 1,1,2,2-tetrahalobutanes. Klyne-Prelog terminology for conformers and torsion angles Conformations of unsaturated acyclic compounds-Propylene,

1-Butene, Acetaldehyde, Propionaldehyde and Butanone. Conformational diastereoisomers and conformational enantiomers -. Factors affecting the conformational stability and conformational equilibrium - Attractive and repulsive interactions. Use of Physical and Spectral methods in conformational analysis.

Conformational affects on the stability and reactivity of acyclic diastereoisomers – steric and stereoelectronic factors-examples. Conformation and reactivity: The Winstein-Holness equation and the Curtin – Hammett principle.

OC-06: Reaction mechanism-II

Nucleophilic Aromatic substitution: Aromatic Nucleophilic substitution: $S_N 1(Ar)$, $S_N 2$ (Ar), and benzyne mechanisms; evidence for the structure of benzyne. Von Richter rearrangement. Definition and types of ambident nucleophiles.

Neighbouring group participation: Criteria for determining the participation of neighbouring group. Enhanced reaction rates, retention of configuration, isotopic labeling and cyclic intermediates. Neighbouring group participation involving Halogens, Oxygen, Sulphur, Nitrogen, Aryl, Cycloalkyl groups, σ and π -bonds. Introduction to nonclassical carbocations.

Electrophilic substitution at saturated carbon and single electron transfer reactions.

Mechanism of aliphatic electrophilic sustitution. S_E1, S_E2, and S_Ei. SET mechanism.

OC-07: Reactive intermediates and Molecular rearrangements.

Reactive Intermediates: Generation, detection, structure, stability and reactions of carbocations, carbanions, carbanes, nitrenes and free radicals.

Molecular rearrangements: Definition and classification. Molecular rearrangements involving 1) electron deficient carbon: Wagner- Meerwein, Pinacol-Pinacolone, Allylic and Wolf rearrangement. 2) electron deficient Nitrogen: Hofmann, Lossen, Curtius, Schmidt and Beckmann rearrangements 3) electron deficient Oxygen: Baeyer-Villiger oxidation. 4) Base catalysed rearrangements: Benzilic acid, Favourski, Transannular, Sommlett-Hauser and Smiles rearrangement

OC-08: Natural products-I (Terpenoids and Alkaloids)

Importance of natural products as drugs. Isolation of natural products by steam distillation, solvent extraction and chemical methods. General methods in the structure determination of terpenes. Isoprene rule. Structure determination and synthesis of

 α -terpeniol and camphor. Biogenesis of monoterpenes. Structure determination and synthesis of β -carotene. General methods of structure determination of alkaloids. Structure determination and synthesis of papaverine and quinine.

Paper-III: CH 203T (PHYSICAL CHEMISTRY)

PC-05: Thermodynamics-II

AND.

PC-06: Photochemistry-I

PC-07: Quantum Chemistry-II

PC-08: Solid state chemistry

PC-05:Thermodynamics-II

Solutions: Specifiying the Solution composition. Partial molar poperties-significance. Relation between solution volume and partial molar volume. Measurement of partial molar volumes- slope and intercept methods. The chemical potential. Variation of chemical potential with T and P. Gibbs-Duhem equation-derivation and significance

Ideal solutions. Thermodynamic properties of ideal solutions. Mixing quantities. Vapour pressure-Raoult's law. Thermodynamic properties of ideally dilute solutions. Vapour pressure- Henry's law.

Nonideal systems. Concept of fugacity, fugacity coefficeient. Determination of fugacity. Non ideal solutions. Activities and activity coefficients. Standard-state conventions for non ideal solutions. Determination of activity coefficients from vapour pressure measurements. Activity coefficients of nonvolatile solutes using Gibbs-Duhem equation.

Multicomponent phase equilibrium: Vapour pressure lowering, freezing point depression and boiling point elevation

PC-06:Photochemistry -I

Electronic transitions in molecules. The Franck Condon principle. Electronically excited molecules- singlet and triplet states. Radiative life times of excited states-theoretical treatment. Measured lifetimes. Quantum yield and its determination. Actinomety-ferrioxalate and uranyl oxalate actinometers-problems.

Derivation of fluorescence and phosphorescence quantum yields. E-type delayed fluorescence- evaluation of triplet energy splitting(ΔE_{ST}). Photophysical processesphotophysical kinetics of unimolecular reactions. Calculation of rate constants of various photophysical processes-problems, State diagrams

Photochemical primary processes. Types of photochemical reactions- electron transfer, photodissociation, addition, abstraction, oxidation and isomerization reactions with examples. Effect of light intensity on the rates of photochemical reactions. Photosensitization. Quenching-Stern Volmer equation. Experimental set up of a photochemical reaction. Introduction to fast reactions- Principle of flash photolysis.

PC-07: Ouantum chemistry-II

²-discussion. Particle in a box- one dimensional and three dimensional. Plots of and Degeneracy of energy levels. Comparison of classical and quantum mechanical particles. Calculations using wave functions of the particle in a box-orthoganality, measurability of energy, position and momentum, average values and probabilities. Application to the spectra of conjugated molecules.

Cartesian, Polar and spherical polar coordinates and their interrelations

Schrodinger equation for the hydrogen atom- separation into three equations. Hydrogen like wave functions. Radial and angular functions. Quantum numbers n, l and m and their importance. The radial distribution functions. Hydrogen like orbitals and their representation. Polar plots, contour plots and boundary diagrams.

Many electron systems. Approximate methods. The variation method-variation theorem and its proof. Trial variation function and variation integral. Examples of variational calculations.

Paricle in a box. Construction of trial function by the method of linear combinations. Variation parameters. Secular equations and secular determinant..

Bonding in molecules. Molecular orbital theory-basic ideas. Construction of MOs by LCAO, H_2^+ ion. The variationan integral for H_2^+ ion. Detailed calculation of Wave functions and energies for the bonding and antibonding MOs. Physical picture of bonding and antibonding wave functions. Energy diagram. The MO and VB wave functions for H_2 molecule and their comparision.

PC-08: Solid state chemistry

9

Magnetic properties of solids- classification of magnetic materials, Magnetic susceptibility, Langevin diamagnetism, Weiss theory of para magnetism

Electronic properties of metals, insulators and semi conductors: Electronic structure of solids, Band theory, band structure of metals, insulators and semiconductors. Electrons, holes and Excitons. The temperature dependence of conductivity of extrinsic semi conductors. Photo conductivity and photovoltaic effect-p-n junctions.

Superconductivity. Occurrence of superconductivity. Destruction of superconductivity by magnetic fields-Meisner effect. Types of superconductors. Theories of super conductivity-BCS theory.

High temperature superconductors. Structure of defect perovskites. High T_c superconductivity in cuprates. Phase diagram of Y-Ba-Cu-O system. Crystal structure of YBa₂Cu₃ O_{7-x}. Preparation of 1-2-3 materials. Origin of high T_c superconductivity.

Paper-IV: CH 204 T(ANALYTICAL TECHNIQUES and SPECTROSCOPY - II)

ASP-05: Electro analytical Techniques.

ASP-06: NMR- II

ASP-07: Mass Spectroscopy

ASP-08: Photoelectron & ESR spectroscopy

ASP-05: Electro Analytical Techniques

a) Types and Classification of Electro analytical Methods.

i) Potentiometry- Types of electrodes, Hydrogen gas, Calomel, Quin hydrone and glass electrodes. Determination of pH. Potentiometric titrations.

ii) Conductometry – Definition of terms – conductivity, specific conductivity, cell constant.

Mobility of ions, Conductometric titrations.

b) D.C Polarography: Dropping mercury electrode- Instrumentation-polarogram. Types of Currents: Residual, Migration, Limiting. Two and Three electrode assemblies. Ilkovic equation (derivation not necessary) and its consequences. Types of limiting Currents: Adsorption, Diffusion, Kinetic. Applications of polarography in qualitative and quantitative analysis. Analysis of mixtures. Application to inorganic and organic compounds. Determination of stability constants of complexes.

i.

c) Brief account of following techniques and their advantages over conventional d.c.polargraphy.

(i) A.C.polarography (ii) Square-wave polarography (iii) Pulse polarography (iv) Differential pulse polarography

d) Amperometric titrations: Principle, Instrumentation. Types and applications of amperometric titrations. Determination of SO₄², metal ions viz., Mg²⁺, Zn²⁺, Cu²⁺ and other substances.

e) Cyclic Voltammetry: Principle, instrumentation, reversible and irreversible cyclic voltammograms. Applications. Cyclic voltammetric study of insecticide parathion.

ASP 06: : NMR spectroscopy-II (1H,19F and 31P NMR)

¹H, ¹⁹F, ³¹P and solid state NMR spectroscopy: First order and non first order spectra e.g., AX, AX₂, AX₃, A₂X₃, AMX and AB, ABC, Simplification of complex spectra: increased field strength, deuterium exchange, Lanthanide shift reagents and double resonance techniques. Discrimination of enantiomers by use of chiral NMR solvents (CSAs), chiral lanthanide shift reagents and Mosher's acid. Nuclear Overhauser enhancement (NOE).

Fluxional molecules- bullvalene, $[\eta^5-C_5H_5M]$, $[\eta^5-(C_5H_5)_2$ Ti $\eta^1-(C_5H_5)_2]$ and $[\eta^4C_8H_8Ru(CO)_3]$.

¹⁹F NMR spectroscopy: ¹⁹F chemical shifts, coupling constants. Applications of ¹⁹F NMR involving coupling with ¹⁹F, ¹H and ³¹P: 1,2 dichloro-1,1 difluoro ethane, BrF₅, SF₄, PF₅, ClF₃, IF₅, HF₂.

³¹P NMR spectroscopy: ³¹P chemical shifts, coupling constants. Applications of ³¹P NMR involving coupling with ³¹P, ¹⁹F, ¹H and ¹³C: ATP, Ph₃PSe, P₄S₃, P(OCH₃)₃, H₃PO₄, H₃PO₃, H₃PO₂, HPF₂, PF₆, PH₃, [Rh (PPh₃)Cl₃] Rh *I*=1/2

Introduction to solid state NMR: Magic angle spinning (MAS). Applications of solid state NMR.

ASP 07: Mass spectrometry

Origin of mass spectrum, principles of EI mass spectrometer. Types of fragments: odd electron and even electron containing neutral and charged species (even electron rule), Nitrogen rule, isotopic peaks, determination of molecular formula, metastable ion peaks. High resolution mass spectrometry. Salient features of fragmentation pattern of organic compounds including β-cleavage, Mclafferty rearrangement, retro Diels – Alder fragmentation and ortho effect. Principle of EI, CI, Fast Atom Bombardment (FAB), Secondary Ion Mass Spectrometry (SIMS), Electrospray (ESI) ionization and Matrix Assisted Laser Desorption Ionization (MALDI) methods. Introduction to principle and applications of Gas Chromatography-Mass Spectrometry (GC-MS) and Liquid chromatography-Mass Spectrometry (LC-MS) techniques.

ASP-08: Photoelectron & ESR sprectroscopy

Photoelectron Spectroscopy

Principle and Instrumentation, Types of Photoelectron Spectroscopy – UPS & XPS Binding Energies, Koopman's Theorem, Chemical Shifts.

Photoelectron Spectra of Simple Molecules: N₂, O₂, F₂, CO, HF, NH₃ and H₂O - Vibrational Structure of PES Bands, Potential energy curves, Interpretation of Vibrational spectral data for ionized (M⁺) species, Prediction of Nature of Molecular Orbitals. ESCA in qualitative analysis, Principles of Auger electron spectroscopy.

Electron Spin Resonance

Introduction, principle, instrumentation, selection rules, interpretation of Lande's factor 'g'. Hyperfine and super hyperfine Coupling. Anisotropy in 'g' values and hyperfine coupling constants. Zero field splitting, Kramer's degeneracy, quadrupolar interactions. Study of free radicals and transition metal complexes. Evidence for covalency in complexes, ex. Cu(II) Bissalcylaldimine, Bis-acetylacetanatovanadyl(II) and hexachloroiridium(IV) complexes.

- I. One component gravimetric estimations. (Use of sintered glass crucible)
- (i). Estimation of Zn2+.
- (ii). Estimation of Ba2+.

II. Analysis of Two component mixtures:

- (i). Separation of Ni²⁺ and Cu²⁺ in a mixture and estimation of Ni²⁺ (gravimetric) and Cu²⁺
- (ii). Separation of Ag⁺ and Ca²⁺ in a mixture and estimation of Ag⁺ (gravimetric) and Ca²⁺
- (iii). Separation of Al3+ and Fe3+ in a mixture and estimation of Al3+ (gravimetric) and Fe3+ (volumetric).

III. Analysis of three component mixtures:

(i). Separation of (Fe2+ and Ni2+) from Zinc (Zn2+) in the given mixture and estimation of

ORGANIC CHEMISTRY SPECIALISATION

SYLLABUS (2017 – 18) ONWARDS

III & IV SEMESTERS

M.Sc. CHEMISTRY(ORGANIC CHEMISTRY)

FOR STUDENTS ADMITTED IN THE YEAR (2017 – 18)

REVISED AS PER NEW (CB) SYLLABUS

M.Sc. CHEMISTRY(ORGANIC CHEMISTRY)

Syllabus for III and IV Semesters

(Effective from the academic year 2017-2018 for Campus including affiliated and district PG Centers)

[Under Restructured CBCS Scheme]
(Approved in the P.G. BOS meeting held on 07-05-2016

M.Sc. ORGANIC CHEMISTRY SPECIALISATION IV SEMESTER SYLLABUS

(For the batch admitted during the academic year 2017-2018 under the CBCS pattern)
[Under Restructured CBCS Scheme]

Paper-1 CH (OC) 401T: Drug Design and Drug Discovery

OC-25: Principles of Drug design and drug discovery

OC-26: Lead modification and SAR Studies

OC 27: QSAR studies

OC 28: Combinatorial Synthesis

Paper CH (OC) 402T: Drug synthesis and mechanism of action

OC-29: Drugs acting on metabolic process, cell wall and specific enzymes

OC-30: Drugs acting on genetic material and immune system

OC-31: Drugs acting on receptors and ion channels

OC-32: Chiral drugs

Paper-3 CH (OC) 403T: Advanced Heterocyclic Chemistry

OC-33: Non aromatic heterocyclics

OC-34: Five and six membered heterocyclics with two hetero atoms

OC-35: Heterocyclics with more than two hetero atoms

OC-36: Larger ring and other heterocycles

Paper-4 – CH (OC) 404(CB₁)T: Advanced Natural Products

OC(CB₁)-1: Biosynthesis of natural products

OC(CB₁)-2-: Structure determination and stereochemistry of natural products by chemical methods.

OC(CB₁)--3: Structure determination and stereochemistry of natural products by spectral methods.

OC(CB₁)--4: Total stereo selective synthesis of natural products.

Paper-4 CH (OC) 404T (CB₂): Bioorganic Chemistry

OC (CB₂) -1: Enzymes and their action

OC (CB₂) -2: Enzyme models and Enzymatic transformations

OC (CB₂) -3: Recombinant DNA and Fermentation technology

OC (CB₂) -4: Coenzymes

Paper-4 CH (OC) T404 (CB₃): Physical- Organic Chemistry

OC (CB₃) -1: MO and VB theory of reactivity

OC (CB₃) -2: Kinetic, isotopic, structural, solvent, steric and conformational effects

OC (CB₃) -3: Nucleophilic, electrophilic and free radical reactivity

OC (CB₃) -4: Supramolecular chemistry

Laboratory courses

PAPER-V CH(OC) 451P: Spectroscopic identification of organic compounds and Chromatography.

PAPER-VI CH(OC) 452P: Synthesis and analysis of drugs

M.Sc. ORGANIC CHEMISTRY SPECIALISATION III SEMESTER SYLLABUS

(For the batch admitted during the academic year 2017-2018 under the CBCS pattern) [Under Restructured CBCS Scheme]

Paper 1- CH (OC) 301T: Conformational Analysis, Asymmetric Synthesis

and Biomolecules

OC09: Conformational Analysis (cyclic systems)

OC10: Principles of Asymmetric synthesis

OC11: Methodologies in asymmetric synthesis

OC12: Biomolecules

15 Hrs

OC 09- Conformational analysis (Cyclic systems) Study of conformations of cyclohexane, mono, di and polysubstituted cyclohexanes, cyclohexene, cyclohexanone (2-alkyl and 3 -alkyl ketone effect), 2-halocyclohexanones, and cyclooctane, cycloheptane perhydroanthracenes. cyclobutane, cyclopentane, and Conformational structures of piperidine, N-Methylpiperidine, tropane, tropine, pseudotropine, decalins decahydroquinoline and quinolizidine. Conformaijonal effects on the stability and reactivity of diastereomers in cyclic molecules - steric and stereo electronic factors - examples Factors governing the reactivity of axial and equatorial substituents in cyclohexanes. Stereochemistry of addition to the carbonyl group of a rigid cyclohexanone ring.

15 Hrs

Introduction and terminology: Topicity in molecules Homotopic, stereoheterotopic (enantiotopic and diastereotopic) groups and faces- symmetry, substitution and addition criteria. Prochirality nomenclature: Pro-R, Pro-S, Re and Si. Stereoselective reactions: Substrate stereoselectivity, forstereoselectivity: Symmetry and transition state criteria, kinetic and thermodynamic control. enantioselectivity Methods for inducing enantio and diastereoselectivity. Analytical methods: % Enantiomeric excess, enantiomeric ratio, optical purity, % diastereomeric excess and diastereomeric ratio. Techniques for determination of enantiomeric excess, specific rotation, Chiral NMR; Chiralderivatizing agents, Chiral solvent, Chiral shift reagents and Chiral HPLC.

Strategies in Asymmetric Synthesis: I. Chiral substrate controlled, 2. Chiral auxiliary controlled, 3. Chiral reagent controlled and 4. Chiral catalyst controlled.

1. Chiral Substrate controlled asymmetric synthesis: Nucleophilic additions to chiral carbonyl compounds. 1, 2- asymmetric induction, Cram's rule and Felkin-Anh model.

2. Chiral auxiliary controlled asymmetric synthesis: α-Alkylation of chiral enolates, azaenolates, imines and hydrazones. 1, 4-Asymmetric induction and Prelog's rule. Use of chiral

auxiliaries in Diels-Alder reaction.

3. Chiral reagent controlled asymmetric synthesis: Asymmetric reductions using BINAL-H. Asymmetric hydroboration using IPC2 BH and IPCBH2.

4. Chiral catalyst controlled asymmetric synthesis: Sharpless and Jacobsen asymmetric epoxidations. Sharpless asymmetric dihydroxylation. Asymmetric hydrogenations using chiral Wilkinson biphosphine and Noyori catalyst. Enzyme mediated enantioselective synthesis

5. Asymmetric aldol reaction: Diastereoselective aldol reaction (chiral enolate & achiral aldehydes and achiral enolate & chiral aldehydes) its explanation by Zimmerman-Traxel model.

OC-12 Biomolecules

Enzymes: Definition. Classification based on mode of action. Mechanism of enzyme catalysis. Lock and Key model and Induced- Fit model. Enantiomer discrimination by Threepoint Contact model. Factors affecting enzyme catalysis. Enzyme inhibition- reversible and irreversible inhibition. Enzymes in organic synthesis. Immobilised enzymes.

2. Nucleic acids: Primary, secondary and tertiary structure of DNA. Types of mRNA,tRNA and rRNA. Replication, transcription and translation. Genetic code. Protein biosynthesis. Chemical

Synthesis of nucleosides and nucleotides.

3. Lipids: Lipid structure- acylglycerols, phosphoglycerides and sphingolipids. Biosynthesis of Lipids and chemical Synthesis of lipids.

Recommended Books:

1. Stereochemistry of organic compounds — Principles & Applications by D Nasipuri 2. Stereochemistry of Carbon compounds by Ernest L Eliel & Samuel H. wilen

3. Stereochemistry: Conformation & Mechanism by P S Kalsi

4. The third dimension in organic chemistry, by Alan Bassendale

3. Stereo selectivity in organic synthesis by R S Ward. 6. Asymmetric synthesis by Nogradi

Asymmetric organic reactions by J D Morrison and H S Moscher

8. Principles in Asymmetric synthesis by Robert E. Gawley & JEFFREY AUBE

Stereo differentiating reactions by Izumi

- 10. Some modern methods of organic synthesis by W Carruthers
- 1. Guidebook to organic synthesis, by R K Meckie, D M Smith & R A Atken

12. Organic synthesis by Michael B Smith

Enzyme structure and mechanism by Fersht and Freeman

14. Bio-Organic chemistry by Hennan Dugas

- 5. Nucleic acids in Chemistry and Biology by G M Blackbum MI Gait
- 16. Lehninger Principles of Biochemistry by D L Nelson and M M Cox
- Outlines of Biochemistry by Conn and Stumpf
- 18. Biotransformations in Organic Chemistry by K Faber.
- Principles of biochemistry by Horton & others.
- 20. Bioorganic chemistry A chemical approach to enzyme action by Herman Dugas and Christopher Penney.

Paper 2- CH (OC) 302T: Modern Organic Synthesis

OC13- Synthetic Reagents I OC

14- Synthetic Reagents II OC

15- New Synthetic reactions

OC 16- New techniques and concepts in organic synthesis

OC-13 Synthetic Reagents I

15 Hrs

i) Protecting groups: a) Protection of alcohols by ether, silyl ether and ester formation b). Protection of 1,2-diols by acetal, ketal and carbonate formation c) Protection of amines by acetylation, benzoylation, benzyloxycarbonyl, t-butyloxycarbonyl, fmoc and triphenyl methyl groups. d) Protection of carbonyls by acetal, ketal and thiol acetal (Umpolung) groups. Protection of carboxylic acids by ester and ortho ester (OBO) formation.

ii) Oxidations: 1) Oxidation of active C-H functions: DDQ and SeO2. 2) Alkenes to diols: Prevost and Woodward oxidation 3) Alcohol to carbonyls; Cr^{VI} oxidants (Jones reagent, PCC. PDC) IBX, DMP, CAN, TEMPO, TPAP, Swern oxidation 4). Oxidative cleavage of 1,2-diols:

Periodic acid and Lead tetra acetate

hydrogenation: Homogenous (Wilkinsons's hydrogenation) and heterogeneous catalytic reduction. b) Non-metallic reductions: Diimide Catalytic reduction c) Dissolving metal reductions: Birch reduction. d) Nucleophilic metal hydrides: LiAlH₄, NaBH₄, and their modifications.e) Electrophilic metal hydrides: BH₃, AlH₃ and DIBAL. f) Hydrogenolysis g) use of tri-n-butyl tin hydride; Radical reductions.

OC-14: Synthetic Reagents II

i) Organometallic Reagents: a) Preparation and application of the following in organic synthesis: 1) Grignard, 2) Organo lithium and 3) Organo copper reagents b) Organo boranes in C-C bond formation c). Organo silicon reagents: reactions involving β-carbocations and αcarbanions, utility of trimethyl silyl halides, cyanides and triflates.

ii) Carbonyl methylenation: a) Phosphorous ylide mediated olefination: 1) Witting reaction, 2) Horner-Wordsworth-Emmons reaction b) Titanium- Carbene mediated olefination: 1) Tebbe

reagent, 2) Petasis reagent c) Olefination by Nysted reagent

OC-15: New Synthetic reactions

15 Hrs

1. Metal mediated C-C and C-X coupling reactions: Suzuki, Heck, Stille, Sonogishira cross coupling, Buchwald-Hartwig and Negishi-Kumada coupling reactions.

2. C=C Formation Reactions: Shapiro, Bamford-Stevens, McMurrey reactions, Julia-Lythgoe

olefination and Peterson's stereoselective olefination. 3. Multicomponent Reactions: Ugi, Passerini, Biginelli, Hantzsch and Mannich reactions.

4. Ring Formation Reactions: Pausan-Khand reaction, Bergman cyclisation, Nazerov cyclisation.

5. Click Chemistry: Criteria for Click reaction, Sharpless azides cycloadditions.

6. Metathesis: Grubb's 1st and 2nd generation catalyst, Olefin cross coupling metathesis(OCM), ring closing metathesis(RCM), ring opening metathesis(ROM), applications.

7. Other important synthetic reactions: Baylis-Hilman reaction, Eschenmoser-Tanabe fragmentation, Mitsunobu reaction, Stork-enamine reaction and Michael reactions.

OC-16: New techniques and concepts in organic synthesis

15 Hrs

1. Techniques in peptide synthesis: Solid phase peptide synthesis, commonly used resins (Rink resin, Wang resin and Ellman resin, synthesis of cross linked Merrifield resin and drawbacks of solid phase synthesis.

2) Solid phase oligodeoxynucleotide synthesis: Triester pathway and phosphoramidite pathway

3) Oligosaccharide synthesis: Protection of hydroxyl groups, cylic oxocarbenium ion, glycosyl donors and glycosyl acceptors, Kahne glycosidation, convergent and linear oligosaccharide

4) Phase Transfer catalysis: Onium and crwon ethers as PTC.

5) Tandem synthesis: Tandem reactions; conjugate addition-aldol reaction, polymerizationcyclisation, elctrocylic-Diels Alder reaction.

6) Baldwin Rules: Exo and Endo cyclisation, tetrahedral, trigonal and diagonal systems,

favoured and disfavoured cyclisations.

7) Chiron approach in organic synthesis: Nature's chiral pool, carbohydrates, amino acids, hydroxy acids, terpenes as chiral precursors. Synthesis of shikimic acid from D-arabinose, furanonycin from D-glucose, S-(+)-ipsenol from S-leucine. 8) Determination of absolute configuration: Mosher's methods.

Recommended Books:

1. Some modern methods of organic synthesis by W. Carruthers

2. Guidebook to organic synthesis, by R K Meckie, D M Smith & R A Atken

3. Organic Synthesis by O House

- 4. Organic synthesis by Micheal B Smith
- 5. Reagents for organic synthesis, by Fieser & Fieser, Vol 1-11 (1984)

6. Organic synthesis by Robert E Ireland

- 7. Handbooks of reagents for organic synthesis by Reich and Rigby, Vol-I-IV
- 8. Total synthesis of natural products: the Chiron approach by S. Hanesian
- 9. Organic chemistry Jonathan Clayden, Nick Greeves and Stuart Warren

Paper 3: CH (OC) 303T: Organic Spectroscopy and Pericyclic reactions.

OC-17: 13C NMR spectroscopy

OC-18: 2D NMR techniques and ORD

OC-19: Pericyclic reactions I OC-20: Pericyclic reactions II

5

OC-17: 13C NMR spectroscopy

15 Hrs

CW and PFT techniques. Types of ¹³C nmr spectra: undecoupled, proton- decoupled and off-resonance decoupled (ORD) spectra. ¹³C chemical shifts, factors affecting the chemical shifts, chemical shifts of organic compounds. Calculation of chemical shifts of alkanes, alkenes and alkynes. Homonuclear (¹³C, ^{13C} J) and heteronuclear (¹³C, ¹⁴ H J and ¹³C- ²H J) coupling. Applications of ¹³C-NMR spectroscopy: Structure determination, stereochemistry, reaction mechanisms and dynamic processes in organic molecules. ¹³C-NMR spectral editing techniques: principle and applications of APT, INEPT and DEPT methods.

OC-18 2D NMR techniques and ORD

15 Hrs

- 1). 2D-NMR techniques: Principles of 2D NMR, Classification of 2D-experiments. Correlation spectroscopy (COSY) HOMO COSY (¹H-¹H COSY), TOCSY (Total Correlation Spectroscopy), Hetero COSY (¹H, ¹³C COSY, HMQC), long range ¹H, ¹³C COSY (HMBC), Homonuclear and Heteronuclear 2D-J-resolved spectroscopy, NOESY and 2D-INADEQUATE experiments and their applications.
- 2) Optical Rotatory Dispersion (ORD) and CD Spectroscopy: Optical rotation, circular birefringence, circular dichroism and Cotton effect. Plain curves and anomalous curves. Empirical and semiempirical rules-The axial haloketone rule, the octant rule, Helicity rule, Exciton chirality method-Exciton coupling between identical chromophores. Benzene sector and chirality rule. Application of the rules to the study of absolute configuration and conformations of organic molecules.

OC-19 Pericyclic reactions I

15 Hrs

Introduction - Characteristics and classification of pericyclic reactions— Electrocyclic, cycloaddition & cycloreversions and sigmatropic reactions—4ne and 4n+2e type examples. Approaches for the interpretation of mechanism of pericyclic reactions-Aromatic Transition States (ATS)/Perturbation Molecular Orbitals (PMO) approach-Concept of Huckel –Mobius aromatic and antiaromatic transition states. Framing Woodward-Hofmann selection rules for all the pericyclic reactions by ATS approach. Solving problems based on ATS approach.

Aromaticity: Aromatic and anti aromatic compounds. Criteria for aromaticity. Huckel's 4n+2 electron rule for benzene and non benzenoid aromatic compounds. Eg. Cyclopropenium ion, cyclopentadienyl ion, cycloheptatrienium ion, azulene and annulenes.

OC-20 Pericyclic reactions II

15 Hrs

Molecular orbitals-definition and their origin-Non-mathematical writing up of molecular orbitals and their symmetry properties for acyclic conjugated systems. Frontier Molecular Orbital (HOMO-LUMO) approach-concept-Framing Woodward-Hofmann selection rules for all the pericyclic reactions by Frontier Molecular Orbital (FMO) approach. Solving problems based on FMO approach. Conservation of orbital symmetry (Correlation Diagrams) approach-concept-Framing Woodward-Hofmann selection rules for electrocylic and cycloadditions & cycloreversions by Conservation of orbital symmetry approach.

Recommended Books:

- 1. Spectroscopic identification of organic compounds by RM Silverstein, G C Bassler and T B Morrill
- 2. Organic Spectroscopy by William Kemp
- 3. Spectroscopic methods in Organic chemistry by DH Williams and I Fleming
- 4. Modern NMR techniques for chemistry research by Andrew B Derome
 - 5. NMR in chemistry A multinuclear introduction by William Kemp
- 6. Spectroscopic identification of organic compounds by PS Kalsi
 - 7. Introduction to organic spectroscopy by Pavia
- 8. Carbon-13 NMR for organic chemists by GC Levy and O L Nelson
 - 9. Nuclear Magnetic Resonance Basic principles by Atta-ur-Rahman
 - 10. Advanced organic chemistry. Part A Structure & Mechanism by Francis A. Corey and Richard J. Sundberg
 - 11. Optical rotatory dispersion by C Djerassi
 - 12. Optical rotatory dispersion and circular dichroism by P Crabbe
 - 13. Mechanism and Structure in Organic chemistry by S Mukherjee
 - 14. Advanced Organic Chemistry: Reactions, Mechanisms & Structure by Michael B Smith & Jerry March
- 🔰 15. Pericyclic Reactions by Mukherjee S M
 - 16. Conservation of Orbital Symmetry by Woodward and Hoffmann
 - 17. Organic Reactions and Orbital Symmetry, Gilchrist and Storr
 - 18. Pericyclic Reactions a problem solving approach, Lehr and Merchand
 - The Nature of Chemistry Units 17-19 Aromaticity Open University, U K. Publications
 - 20. The aromaticity III level, units 17-19 British open university volumes
 - 21. Aromatic character and aromaticity by G.M.Badger
 - 22. Non-benzenoid aromatic compounds by D.Ginsberg
 - 23. Nonbenzenoid compounds by Lloyds

Paper-4 CH (OC) 304T: Photochemistry, synthetic strategies and Green Chemistry

OC-21 Photochemistry

C-22 Synthetic strategies - I

OC-23 Synthetic strategies - II

C-24 Green Chemistry

C-21: Photochemistry

15Hrs

Photochemistry of (π, π^*) transitions: Excited states of alkenes, cis-trans isomerisation, hotostationary state, electrocyclisation and sigmatropic rearrangements, di- π methane rearrangement. Intermolecular reactions, photocycloadditions, photodimerisation of simple and lonjugated olefins, addition of olefins to α , β -unsaturated carbonyl compounds. Excited states of aromatic compounds, Photoisimerisation of benzene

Photochemistry of $(n-\pi^*)$ transitions: Excited states of carbonyl compounds, homolytic cleavage of α -bond, Norrish type I reactions in acyclic and cyclic ketones and strained cycloalkanediones. Intermolecular abstraction of hydrogen: photoreduction - influence of emperature, solvent, nature of hydrogen donor and structure of the substrate

Intramolecular abstraction of hydrogen: Norrish type II reactions in ketones, Esters and 1, 2-liketones, Addition to carbon-carbon multiple bonds, Paterno-Buchi reaction, Photochemistry of nitrites-Barton reaction.

OC-22: Synthetic Strategies I

15 Hrs

Synthetic Strategies; Introduction, Terminology: target, synthon, synthetic equivalent, functional group interconversion (FGI), functional group addition, functional group elimination. Criteria for selection of target. Linear and convergent synthesis. Retrosynthetic analysis and synthesis involving chemoselectivity, regioselectivity, reversal of polarity and cyclizations. Order of events in synthesis by retrosynthetic approach, explanation with examples Salbutamol, Propoxycaine and Dinocap. Introduction to one group C-C and C-X disconnections. One group C-C disconnections, Alcohols and carbonyl compounds. One group C-X disconnections, Carbonyl compounds, alcohols, ethers and sulphides.

OC-23: Synthetic Strategies II

15 Hrs

Introduction to two group C-C and C-X disconnections, Two group C-X disconnections; 1,1-difunctionalised, 1,2-difunctionalised and 1,3-difunctionalised compounds. Two group C-C disconnections; Diels-Alder reaction, 1,3-difunctionalised compounds, 1,5- difunctionalised compounds, Michael addition and Robinson annulation. Control in carbonyl condensations, explanation with examples oxanamide and mevalonic acid. Strategic bond: definition, choosing disconnection/ guidelines for disconnection; disconnection of C-X bonds, disconnect to greatest simplification, using symmetry in disconnection, disconnection corresponding to known reliable reaction, high yielding steps and recognizable starting materials. Other approaches to retro

synthesis – biomimetic approach (Johnsons polyene cyclisation), and retro mass spectral fragmentation. Application of the strategies to the synthesis of (+) Disparlure, Retronecene, longifoline.

OC-24: Green Chemistry

15Hrs

Introduction. Principles, atom economy and scope. Introduction to alternative approaches.

- 1. Solvent free reactions-principle, scope, utility of solvent free condition reactions.

 Organic Synthesis in solid state (without using any solvent): Michael addition, Beckmann rearrangement, Synthesis of aziridines; solid supported organic synthesis: Synthesis of aziridines, pyridines, chromenes and flavones.
- 2. Aqueous Phase Reactions: Diels-Alder Reaction, Heck reaction, epoxidation, Dihydroxylation (Syn- & Anti-)
- 3. Microwave Technology: Microwave equipment, activation-benefits, limitations, microwave effects.
 - a) Microwave Solvent free reactions (Solid state Reactions) Deacetylation, deprotection, saponification of esters, alkylation of reactive methylene compounds, synthesis of nitriles from aldehydes, reductions.
 - b) Microwave assisted reactions in water Hoffmann elimination, hydrolysis, oxidation, saponification reactions.
- c) Microwave assisted reactions in organic solvents Esterification reactions, Fries rearrangement, Orthoester Claisen rearrangement, Diels- Alder reaction, decarboxylation.
- d) Microwave assisted reactions under PTC conditions:
 - Ultrasound assisted reactions: introduction, substitution reactions, addition, oxidation, reduction reactions.
 - 5. Organocatalysis: Aldol reactions, Acyl transfer reactions, nucleophilic N-heterocyclic carbenes in asymmetric organocatalysis, setter reaction and Baker's Yeast.
 - 6. Ionic liquids: Introduction and applications in organic synthesis (illustrate with two examples).

Recommended Books

- 1. Green chemistry, Theory and Practical, Paul T.Anastas and John C.Warner.
 - 2. New trends in green chemistry By V.K.Ahulwalia and M.Kidwai.
 - Organic Synthesis: Special techniques. V.K.Ahulwalia and Renu Aggarwal.
 - 4. Enantioselective organocatalysis, Peter I Dallco, Willey-VCH.
 - 5. Molecular Reactions and Photo chemistry by Depuy and Chapman
 - 6. Photochemistry by C W J Wells
 - 7. Organic Photochemistry by Turro
 - 8. Molecular Photochemistry by Gilbert & Baggo
 - 9. Organic Photochemistry by D Coyle
 - 10. Organic Synthesis-The disconnection approach by S Warren
- 11. Organic Synthesis by C Willis and M Willis
 - 12. Problems on organic synthesis by Stuart Warren

Semester III Laboratory courses

Paper CH (O) 351P: Separation and identification of organic compounds

Separation of two component mixtures by chemical methods and their identification by chemical reactions — separation by using solvent ether, 5 % aqueous sodium bicarbonate, 5% sodium hydroxide and dil hydrochloric acid, checking the purity of the two components by TLC, identification of the compounds by a systematic study of the physical characteristics (mp/bp), extra elements (nitrogen, halogens and sulfur), solubility, functional groups, preparation of crystalline derivatives and identification by referring to literature. A minimum of 10 mixtures should be separated and analyzed by these procedures.

Separation of three component mixtures by chemical methods. A minimum of two mixtures should be separated and analyzed.

Paper CH (O) 352P: Synthesis of organic molecules & isolation of natural products (A) Laboratory synthesis of the following compounds:

2-Phenyl indole (Fischer indole synthesis), 7-hydroxy-3-methyl flavone (Baker - Venkatraman reaction), 2,5-Dihydroxy acetophenone (Fries reaction), 4- Chlorotoluene from p-toluidine (Sandmeyer reaction), Benzilic acid from benzoin (Benzillic acid rearrangement), Benzpinacol (photochemical reaction), 7-hydroxy coumarin (Pechman synthesis), Photo-dimerization of maleic anhydride, benzophenone (Friedel-Crafts reaction), Benzanilide rearrangement), Vanillyl alcohol from vanillin (NaBH4 reduction), 2- and 4-nitrophenols (nitration and separation by steam distillation), Acridone from Phthalic anhydride.

(B) Isolation of the following natural products:

Caffeine from tea leaves (solvent extraction), Piperine from pepper (Soxhlet extraction), Eucalyptus oil from leaves (steam distillation), Lycopene from tomatoes.

Recommended Books:

- 1. Practical organic chemistry by Mann & Saunders
- Text book of practical organic chemistry by Vogel
 - 3. The systematic identification of organic compounds by Ralph L. Shriner, Christine K. F. Hermann, Terence C. Morrill and David Y. Curtin

p. Ve and p. Servasig

P. Ve Morrison

P. Ve M

M.Sc. CHEMISTRY(ORGANIC CHEMISTRY) IV SEMESTER SYLLABUS

(For the batch admitted during the academic year 2017-2018 under the CBCS pattern) [Under Restructured CBCS Scheme]

Paper-1 CH (OC) 401T: Drug Design and Drug Discovery

OC-25: Principles of Drug design and drug discovery

OC-26: Lead modification and SAR Studies

OC 27: QSAR studies

OC 28: Combinatorial Synthesis

OC- 25: Principles of Drug design and drug discovery

15 Hrs

Introduction to drug discovery. Folklore drugs, stages involved in drug discovery- disease, drug stargets, bioassay. Discovery of a lead- screening of natural products and synthetic compound Existing drugs as leads (me too drugs). libraries. Pharmacokinetics (ADME), pharmacodynamics. Nature of drug – receptor interactions and their theories – Occupancy theory, Induced - fit theory, Macromolecular purturbation theory and Two-state model of receptor activation. Natural products as lead structures in drug discovery - Pharmacophore structure pruning technique e.g. morphine. Discovery of lead structure from natural hormones neurotransmitters. Principles of design of agonists (e.g.Salbutamol), antagonists e.g. cimitidine) and enzyme inhibitors (e.g. captopril). Drug discovery without lead - serendipity-Penicillin and Librium as examples. Principles of prodrug design. Introduction to drug patents and Clinical trials.

OC-26: Lead modification and SAR Studies

and deliver

15 Hrs

SAR: Lead modification strategies, Bioisosterism, variation of alkyl substituents, chain nomologation and branching, variation of aromatic substituents, extension of structure, ring expansion and ring contraction, ring variation, variation and position of hetero atoms, ring fusion, simplification of the lead, rigidification of lead. Discovery of oxaminquine, salbutamol, cimitidine and captopril Structure-Activity Relationship studies in sulfa drugs, benzodiazepines, and taxol analogs.

OC-27: Quantitative Structure- Activity Relationship (QSAR) studies Introduction, physicochemical properties - pKa, electronic effects and Hammett constants(σ), lipophilicity constant(π), steric effects and Taft's constant, linear and nonlinear relationship etween biological activity and Hammett/ Lipophilicity Substituent constants. Lipenski rule of five. Hansch analysis, Craig's plot, Topliss scheme, Free Wilson approach, cluster significant analysis. Three case studies. Principles of molecular modeling in drug design.

V. huling D. Savager der P. Lavager der F. Service

28: Combinatorial Synthesis

15Hrs

troduction. Combinatorial approach. Combinatorial libraries, technologies. Solid phase hesis, types of resins. Linkers. Reactants for solid phased synthesis. Methods of Parallel inthesis: Haughton's tea bag procedure. Automated parallel synthesis. Methods in Mixed binatorial synthesis: general principles. Furkas mix and split combinatorial synthesis, structure determination of active compounds-Deconvolution, Methods in deconvolutionrsive deconvolution, tagging and use of decoded sheets. Examples of Combinatorial hemistry Planning and designing of combinatorial synthesis, Spider like scaffolds, drug Secules. Automation in Combinatorial chemistry. High throughput screening.

per CH (OC) 402T: Drug synthesis and mechanism of action

- -29: Drugs acting on metabolic process, cell wall and specific enzymes
- Trugs acting on genetic material and immune system
- -31: Drugs acting on receptors and ion channels
 - 2: Chiral drugs

Drugs acting on metabolic process, cell wall and specific enzymes

concepts of mechanism of drug action: Introduction to macromolecular targets, hydrates, proteins, lipids and nucleic acids as possible drug targets. Classification of drugs. zyme inhibition and its types.

Pags acting on metabolic process:

lates -Discovery and mechanism of action of sulphonamides, Synthesis of fomethoxazole, sulfodoxine, sulfaguanidine and dapsone.

Inopyrimidines -trimethoprim, bacterial resistance to sulfonamides and drug synergism Drugs acting on cell wall: Structure of bacterial cell wall, β-Lactam antibiotics – mechanism of

of penicillins and cephalosporins. Synthesis of pencillin-G and cephalosporin-C, alexin and cycloserine. Resistance to pencillins, broad spectrum penicillins – cloxacillin, scillin, ampicillin, amoxicillin and carbenicillin. β-Lactamase inhibitors - Structural mulae and mode of action of clavulanic acid and sulbactum

s acting on specific enzymes: H⁺/K⁺ -ATPase inhibitors- synthesis of Omeprazole and rbonic anhydrase inhibitors-synthesis of Acetazolamide.

20: Drugs acting on genetic material and immune system

ugs acting on genetic material: Introduction, classification and mechanism of action.

NA-intercalating agents-Anticancer and antimalarial agents. Structural formulae of unomycin, Adriamycin and Amsacrine. Synthesis of Amscarine, Nitracrine, Quinacrine and Icoquine.

NA- Binding and nicking agents: Antiprotozoal drugs. Synthesis of Metronidazole, metridazole and Tinidazole.

A-Alkylators: Synthesis of Cyclophosphamide and Bisulphan.

DNA-Polymerase inhibitors: Antiviral agents- Synthesis of Acyclovir and AZT.

NA-Topoisomerase inhibitors: Anti bacterial agents. Synthesis of Ciprofloxacin and orfloxacin. Structural formulae of loxacin and Lomefloxacin.

sibitors of transcribing enzymes: Anti-TB and antileprosy agents-structural formulae of famycins and partial synthesis of Rifampicin.

Jugs interfering with translation process: Antibacterial drugs- Structural formulae of ythromycin, 5-Oxytetracycline and Streptomycin. Synthesis of Chloromycetin

acting on immune system: Introduction to immune system. Immunosupressing agentuctural formula of Cyclosporin. Immunoenhancers-use of vaccines and strucrural formula of sisol. : Drugs acting on receptors and ion channels

troduction to nervous system: structure of neuron, nerve transmission. Definition and examples nist, antagonist, neurotransmitters and receptors.

rugs acting on receptors:

derenergic receptors - Introduction and classification. α-Adrenergic-receptor agonists and tagonists- Synthesis and biological activity of Nor-adrenaline, Methyl L dopa and Tetrazosin. Adrenergic-receptor - agonists and antagonists - Synthesis and pharmacological activity of atamol, Tetrabutalin, Propranolol and Atenolol.

Cholinergic-receptors: Introduction and classification. Cholinergic-receptor agonists and Sonists- Structural formulae of Nicotine, Atropine and Tubocurarine. Synthesis of Acetyl

noline and Succinyl choline

pamine receptors: Introduction and classification. Dopamine- receptor agonists and atagonists- Biosynthesis of Dopamine. Synthesis of L-Dopa and Chlorpromazine.

rotonin receptors: Introduction and classification. Serotonin receptor agonists and ntagonists-synthesis and pharmacological activity of Serotonin and Metoclopramide.

stamine receptors: Introduction and classification. Histamine receptor agonists and ntagonists-synthesis and biological action of Histamine, Chloropheneramine, and Ranitidine.

prmones and their receptors: Introduction to estrogen receptors, Structural formulae of

gs acting on ion channels: Introduction to ion channels, drugs acting on Ca2+, Na+ and Cl synthesis and of hannels and their mode of action. Structural formulae of Tetracaine and dipine, Diltiazem, Tetracine and 4-Aminopyridine.

2-32: Chiral drugs

ptroduction to chiral drugs. Three-point contact model, Eutomer, Distomer and eudesmic ratio. Affer's rule. Role of chirality on biological activity: Distomers – a) with no side effects b) with undesirable side effects c) both isomers having independent therapeutic value d)combination ducts having therapeutic advantages e) metabolic chirality inversion. Ininavir sulfate, S- Metaprolol, S-Ibuprofen, Synthesis and pharmacological activity of (+)Lomefloxacin, Fluvastatin, Socetrazine, 2S-Verapamil, S,S-Ethambutol Dexormaplatin, R-Indacrinone, Dextropropoxyphen, (+)Ephedrine, (+)Griseofulvin, eglinide, Oxybutynin hydrochloride, S,S- Captopril and S,S,S- Enalaprilate.

r-3 CH (OC) 403T: Advanced Heterocyclic Chemistry

- on aromatic heterocyclics
 - Five and six membered heterocyclics with two hetero atoms
- eterocyclics with more than two hetero atoms
 - i: Larger ring and other heterocycles

3: Nonaromatic heterocyclics

15 Hrs

- sis, reactivity and importance of the following ring systems. Azirines, Aziridines, Thiiranes, Diazirenes, Diaziridines, Oxaziridines, Azetidines, Oxetanes and Thietanes
- Five and six membered heterocyclics with two hetero atoms

 15 Hrs

 15 is, reactivity, aromatic character and importance of the following heterocycles:

 16 in Imidazole, Oxazole, Thiazole, Isoxazole, Isothiazole, Pyridazine, Pyrimidine.

 17 is oxazole, Inidazole, Denzimidazole, benzoxazole and benzthiazole.

Heterocyclics with more than two hetero atoms

15 Hrs

esis, reactivity, aromatic character and importance of the following Heterocycles: 1,2,3-1,2,4-triazoles, Tetrazoles, 1,2,4-oxadiazole, 1,3,4-oxadiazole, 1,2,5- oxadiazole, 1,2,3-zoles, 1,3,4- thiadiazoles, 1,2,5- thiadiazoles, 1,2,3-triazine, 1,2,4- triazine, 1,3,5- triazine, Synthesis and importance of purines and pteridines. Synthesis of Caffeine, romine and theophylline.

Larger ring and other Heterocycles

15 Hrs

es rearrangements of 1,2 - diazepines. Synthesis of Benzoazepines, Benzodiazepines, es rearrangements, Azocines and Azonines. Synthesis of selenophenes, henes, Phospholes and Boroles.

Sended Books:

terocyclic Chemistry, T.Gilchrist

- roduction to the Chemistry of heterocyclic compounds, R.M.Acheson
- terocyclic Chemistry, J.A.Joule & K.Mills
- ples of Modern Heterocyclie Chemistry, A.Paquette
 - erocyclic Chemistry, J,A.Joule & Smith
- Boook of Heterocyclic Chemistry, A.R.Katritzky
